

ROTO-MOULDED COACH COMPONENTS

A handy guide from Corilla Plastics

Rotational moulding has many advantages over other processes, especially when it comes to the manufacture of coach and bus components. Take a look below to see how we could save you money, maintenance time and put more miles on the clock between replacements.

Seat Frames

- Less rigidity than materials such as metal and are more durable as a result

Water Storage Tanks

- Lighter than many other options
- Easy to repair and replace
- High production volumes
- Custom shapes

Luggage-floor Bases

- One piece moulded for extra strength
- No jagged edges or nuts & bolts for luggage to catch on

Diesel Fuel Tanks

- Light and durable
- Low cost production
- Heat resistant

Inlet & Outlet Ducts

- Don't conduct heat
- High production volumes
- Easily customisable shapes

Consoles

- Lighter than other plastics
- Durable
- Low cost to procure in bulk

Washer Bottles

- Heat resistant
- Transparent if needed
- Low cost to procure in bulk

Under Wheel Arches

- Mass production is low cost and easy
- Light and durable
- Custom shapes and sizes are easily created
